DETAILED ACTION

Election/Restrictions

Claims 31 to 55 are withdrawn from further consideration pursuant to 37 CFR 1.142(b) as being drawn to a nonelected invention, there being no allowable generic or linking claim. Election was made **without** traverse in the reply filed on 8/10/10.

Claim Rejections - 35 USC § 101

35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claims 56 to 72 are rejected under 35 U.S.C. 101 because the claimed invention is directed to non-statutory subject matter.

Claims 56-64, 67 and 68 recite a method or computer readable instructions, not within the technological arts. A process or method must (1) be tied to another statutory class (such as a particular apparatus) or (2) transform underlying subject matter (such as an article or materials) to a different state or thing. Neither of these requirements are met by the claims, therefore the claims do not qualify as a statutory process as they do not positively recite subject matter being transformed, by identifying a material being changed to a different state. In re Bilski v. Kappos, No. 08-964 (June 28, 2010).

Claims 65, 66, and 69-71 recite only an insignificant extra-solution activity, or nominal recitation of a patentable subject matter which does not transform an unpatentable principle (e.g. Software) into a patentable process. Mere field-of-use limitations are generally insufficient to render an otherwise ineligible process claim

patent-eligible, and "insignificant postsolution activity will not transform an unpatentable principle into a patentable process." Diehr 450 U.S. 191-192. See Bilsky 88 USPQ2d 1394. Nominal recitations of structure in an otherwise ineligible method fail to make the method a statutory process under section 101. Benson 409 U.S. at 71-72. A general purpose computer is not a particular machine, and thus innovative software processes are unpatentable if they are tied only to a general purpose computer and an "incidental physical limitation, such as data gathering, field of use limitations, and post-solution activity are not enough to convert an abstract idea into a statutory process". Langemyr Appeal 2008-1495, p 20-21. The only recitation(s) of structure include a "device" in the preamble and "calculations sections" (unclear if this is structure or not) which is/are found to be insignificant extra-solution activity.

Allowable Subject Matter

Examiner notes that claims 56 to 72 contain allowable subject matter and would be allowable if the 101 rejections can be overcome.
